## **EUROWASH EW3520 DOUBLE TANK RACK CONVEYOR DISHWASHER**

Product code (SKU): 68138

In stock: yes

Double tank dishwasher with a productivity of 200 racks/hour.

Water consumption is reduced to less than 2 litres per rack, and the machine can operate on a network pressure of just one bar.

With their modular design, the dishwashers can be completed with a range of options such as the drying tunnel, the corner pre-wash and the heat exchange.

The pre-washing area is one from which the highest performance is expected since it has to remove the toughest dirt. Equipped with an extremely powerful pre-wash with an 82cm length, and provided with the same washing system as a compact rack conveyor.

Many competitors offer economical solutions with 60cm or even 40cm lengths which frequently end up only soaking the dishes instead of pre-washing them.
